On the Cover: Congenital vascular rings are fairly common, can present with cryptic symptoms in adults, and are often missed. This schematic shows the 2 most common types of vascular rings. Left: A left aortic arch with aberrant right subclavian artery constituting an incomplete ring. Right: A double aortic arch. Here, the left arch is partially atretic and cannot be visualized easily with current imaging modalities as the atretic parts do not fill with contrast medium. From the article by Lodeweges et al., pages 438-445.
