Chest x-ray quiz

Question

Compiled by Marea Reading RN, Consultant Cardiothoracic Nursing Education, Sydney, NSW

Question

This is a follow-up from January issue of the 34-year-old man who presented to Emergency Department with breathlessness and nausea. He was diagnosed with a traumatic pseudoaneurysm and urgent surgical intervention was arranged. What observations can be made of his post-operative chest X-ray, which is an anterior-posterior (AP) supine view? Are you happy with the placement of the endotracheal tube (ETT), central venous catheter (CVC) and intragastric tube (IGT)?

Answer and Discussion for the Chest X-ray Quiz is in page 147
