ESSO and EUSOMA conclude ground breaking partnership study in International Survey on variability in breast cancer surgery training across Europe

ESSO Clinical Research Strategy

ESSO is proud to forward a position paper that describes the different research activities of the Society over the past decade and an action plan for the upcoming five years to lead innovative and high-quality surgical oncology research. ESSO proposes to consider pragmatic research methodologies as a complement to randomised clinical trials (RCT), advocates for increased funding and operational support in conducting research and aims to enable young surgeons to be active in research and establish partnerships for translational research activities. ESSO would like to thank all participants and contributors. For full access to the PDF document, check out the EJSO (European Journal of Surgical Oncology) on the ESSO website here

ESSO cements new frontiers & learning opportunities signing partnership agreement with PSSO (Polish Society of Surgical Oncology)

Fostering links with national surgical oncology societies ESSO President Tibor Kovacs attended the 25th Jubilee conference of

the Polish Society of Surgical Oncology (PSSO), and gave a lecture on controversies in breast cancer surgical therapy during the opening session. On this occasion, T. Kovacs signed a MoU with the PSSO its leadership, Wojciech Wysocki, PSSO President, and Piotr Rutkowski, Past-President. The purpose of this MoU is to acknowledge the existing long-term relationship between our two societies and develop further areas of co-operation. Read more

ESSO EYSAC Nutritional Survey

Data on patient nutrition is a fundamental pillar in the battle against cancer, which is why the European Society of Surgical Oncology and its Young Alumni Club (EYSAC) needs you to complete a global survey! The study is focused on if and how patients are screened for their nutritional status before undergoing surgery depending on specialization. The study rationale is to investigate and compare practice of different sub-specialties in different countries in order to evaluate and design measure of interventions. Results are expected to be presented during the ESSO 39 Congress in Rotterdam. Access the ESSO website here for more information and contribute towards this important research now!
