Following publication of this article, the authors have subsequently realized that “10 µg/ml and 100 µg/ml of SBL in Fig. 3B” is identical to “10 µg/ml and 100 µg/ml of PNA in Fig. 4B” in a publication by the authors in Food Chem. Toxicol. 2014; 64: 369–77. Moreover, the labeling of Fig. 5 was incorrect with respect to text and figure legend. The

authors now display the corrected version of Figs. 3B and 5. This corrected figure does not alter the conclusions of our study or the hypothesis we proposed. The figure legend remains the same for this corrected figure.
