The authors regret to inform that, inadvertently, they introduced a mistake on page 106, in the ‘HRM analysis’ chapter. The size of the PCR product is 80 bp, not 102bp. The correct sentence is thus:

The forward oPVP440 (5' GTCTGAGGCCTTTGATGCAG 3') and reverse oPVP441 (5' AGCGCTTCAACATTCAACTT 3') primers were

designed to generate a 80 bp PCR product from the MCP gene, encompassing the variable region containing the SNPs.

This mistake has no impact on the results. The authors would like to apologise for any inconvenience caused.
