## Foreword

**D**ifferences in health outcomes based on race and ethnicity have been widely documented. In order to assess the impact of new treatments and interventions in all populations diversity enrollment in clinical trials is imperative.

In this issue of the Journal et Clark L et al reports a multi-stakeholder research approach focusing on all key clinical trial stakeholders (patients, investigators, referring physicians, and clinical trial coordinators). The authors identified solutions that will allow to overcome multiple critical barriers to recruitment of racially and ethnically diverse patients in clinical trials. Moreover, the content of this collaborative endeavor will be impactful for health care industry and academic as they develop strategies for increasing diversity in their own clinical trials.
