Editorial

The PARIS-ECHO Imaging 2019 Congress organized by the Cardiovascular Imaging Subsidiary will be held from June 12 to 14, 2019 at the Conference Center in Paris – France.

As every two years, this “rendez-vous” for any cardiologist, will be an opportunity to update the knowledge in echocardiography of course, but also in all imaging techniques and in the use of these techniques to the service of patients as well as for best using new therapies (medications, implantable devices and surgeries).

Echocardiography is often indispensable for many of our care: in emergency, in consultation, in hospital settings.

These days, exams are repeated for example in the field of cardio-oncology or the follow-up of asymptomatic valvular. Technological advances allow for greater reliability, better reproducibility of our exams, and it is necessary to include these advances in our routine practice. PARIS-ECHO Imaging 2019 is made for this!

In the same way, in PARIS-ECHO Imaging 2019, the use of other imaging modalities will be discussed: MRI, CT, SPECT, PET but also stress tests.

The Congress will be the place where “the imager-cardiologist” can, with the participation of anaesthetists, surgeons, interventional cardiology, EPs and all other clinicians, exchange and put in perspective the best use of Imaging-techniques that we have access to.

The industry in the field of imaging, prostheses and pharmacological agents will find a unique opportunity to share their novelties with the cardiac world (private and public practices).

All these new treatments find their place more easily thanks to the imaging and the appropriate teaching of the doctors who image the patients!

Thus, we wish to propose a large number of sessions and formats of sessions (from the symposium to the small groups), with always the desire to focus on exchanges and interactions.

There will be innovations, digital tools, simulation tools but come on, you won’t regret it!

We will all learn in the warm atmosphere that we hold every time of this Congress, which we wish to be indispensable in the agenda of everyone!

PARIS-ECHO Imaging 2019: imaging at the service of clinicians and patients: learning the use and indications, strengths and weaknesses of the tools available to us in 2019.
