

Trends in Endocrinology & Metabolism

March 2019, Volume 30, Number 3, pp. 145–224

Spotlight

- 145 **Fueling Ketone Metabolism Quenches Salt-Induced Hypertension** *David E. Place and Thirumala-Devi Kanneganti*

Forum

- 147 **Metabolic Disease Epidemics: Emerging Challenges in Regenerative Medicine** *Raquel Costa-Almeida, Rui L. Reis, and Manuela E. Gomes*

Reviews

- 150 **Implications and Future Perspectives of AGEs in PCOS Pathophysiology** *Zaher Merhi, Eleni A. Kandaraki, and Evanthia Diamanti-Kandaraki*
- 163 **Endoplasmic Reticulum Stress, the Hypothalamus, and Energy Balance** *Isin Cakir and Eduardo A. Nilni*
- 177 **Sirtuins in Metabolic and Epigenetic Regulation of Stem Cells** *Yi Fang, Shuang Tang, and Xiaoling Li*
- 189 **Antipsychotics Promote Metabolic Disorders Disrupting Cellular Lipid Metabolism and Trafficking** *Chiara Vantaggiato, Elena Panzeri, Andrea Citterio, Genny Orso, and Marco Pozzi*
- 211 **Spatial Technologies in Obesity Research: Current Applications and Future Promise** *Peng Jia, Hong Xue, Li Yin, Alfred Stein, Minqi Wang, and Youfa Wang*

REVIEWS

On The Cover: “3S” geospatial technologies include remote sensing (RS), geographical information systems (GIS), and global positioning systems (GPS). These technologies are being used more and more in understanding the influences of environmental and societal factors on public health. On pages 211–223 of this issue, Jia and colleagues discuss how the use of these geospatial technologies can provide aid in determining facets of obesogenic environments and individual environmental exposure in obesity research and epidemiology.
