

Trends in Endocrinology & Metabolism

April 2019, Volume 30, Number 4, pp. 225–282

Spotlights

- 225 **NR Supplementation During Lactation: Benefiting Mother and Child** *Dengbao Yang and Yihong Wan*
- 227 **Anticatabolic Effects of Ketone Bodies in Skeletal Muscle** *Andrew P. Koutnik, Dominic P. D'Agostino, and Brendan Egan*
- 229 **ACMSD: A Novel Target for Modulating NAD⁺ Homeostasis** *Jun Yoshino*
- 232 **'Et Tu, Leptin?'** *Diego Perez-Tilve*

Opinion

- 234 **Veiled Potential of Secretagogen in Diabetes: Correlation or Coincidence?** *Anand Kumar Sharma, Radhika Khandelwal, and Yogendra Sharma*

Reviews

- 244 **Mathematical Modelling of Endocrine Systems** *Eder Zavala, Kyle C.A. Wedgwood, Margaritis Voliotis, Joël Tabak, Francesca Spiga, Stafford L. Lightman, and Krasimira Tsaneva-Atanasova*
- 258 **Combined Antioxidant and Glucocorticoid Therapy for Safer Treatment of Preterm Birth** *Tessa A.C. Garrud and Dino A. Giussani*
- 270 **Calcium Signaling As a Therapeutic Target for Liver Steatosis** *Eunüs S. Ali and Nikolai Petrovsky*

On The Cover: Endocrine axes are highly dynamic physiological systems that have complex regulatory organization and functions which can be difficult to describe using only basic experimental research. On pages 244–257 of this issue, Zavala and colleagues discuss interdisciplinary approaches using mathematical modelling in conjunction with experimental research to better define complex mechanisms in endocrine systems.
