## Editorial

# Editorial

We are pleased to announce that, from 2019, *Infection, Disease & Health* is included in Elsevier's freedom and subject collections. These packages are available to thousands of institutions around the world, allowing many more researchers worldwide to read and cite the journal than in previous years. If you have not already seen the virtual special issues collated online on the *Infection, Disease & Health* website, I would encourage you to do so. The collections include antimicrobial resistance, urinary tract infections, vector-borne disease and The Centre of Research Excellence in Reducing Healthcare Associated Infections. The antimicrobial resistance issues contains articles covering a broad range of topics, including antibiotic prescribing in Emergency departments [1] and General Practice [2], antibiotics stewardship [3] and resistance data [4,5]. There are further articles related to the topic of antimicrobial resistance in this issue [6,7].

## Conflict of interest

Brett Mitchell is the Editor-in-Chief of *Infection Disease and Health*.
