# MICROBIAL SURVEILLANCE TESTING MADE EASY

*Healthmark offers the One-Two Punch to Identify and Document the Efficacy of Your Endoscope Reprocessing*

## SCREEN WITH THE NOW! TEST

*Rapid Indicator of  
Gram-Negative bacteria*

This immediate, practical screening test is available as a swab or flush method. Simply flush the lumen or swab the elevator mechanism of a flexible endoscope, such as a duodenoscope, and follow the procedure for gram-negative bacteria detection in less than 12 hours.

< 10 CFU

 healthmark

## AUDIT WITH THE FLEXIBLE ENDOSCOPE SAMPLING KIT

*Surveillance tool for the random testing of duodenoscopes in compliance with FDA guidelines - In association with Nelson Laboratories*

A simple and complete kit. After flushing and brushing the lumen and elevator mechanism of a duodenoscope, simply follow the procedure to have the sample solution & brush heads quickly sent to Nelson Laboratories - the leader in independent testing of flexible endoscopes. All tools are included for testing and shipment.

# 75,000 deaths occur annually in US hospitals due to HAIs

(It's time to take proven infection prevention further)

Figures released from the CDC make stark reading for Infection Preventionists. An estimated 722,000 healthcare-associated infections occur annually, resulting in 75,000 deaths and billions in additional costs.<sup>1</sup> More than half of these occurred outside of the intensive care unit.

To change these numbers, hospitals are adopting Hibiclens<sup>®</sup> for housewide daily patient bathing as an easy, valuable, infection prevention strategy. Hibiclens is helping to reduce facility-wide HAI risks, such as CLABSIs, CDI, and MRSA.<sup>2-4</sup>

For more information on how daily bathing with Hibiclens can help you in your infection prevention strategy visit [www.hibiclens.com](http://www.hibiclens.com).
