It was identified a mistake in the introduction, second paragraph. The authors regret that the term ICUAW has been established as a “clinically-detected weakness in critically-ill patients who can have any number of possible etiologies beyond the critical illness itself” [7].

The correct definition should be: “ICUAW has been established as a clinically-detected weakness in critically-ill patients which cannot be attributed to any etiologies outside to critical illness itself” [7].

The authors would like to apologize for any inconvenience caused.
