The authors regret that there is an omission in the text and an error in Fig. 3. They are listed below:

1) In the third paragraph of item 2.4, the word OPG must be included. The correct form is:

“To quantify the bone expression of FGF-23, Scl, OPG and RANKL, whose presence in the trabecular bone was limited to osteocyte cells,

the staining result for any given osteocyte was classified as positive or negative, and the total number of trabecular osteocytes with positive staining was counted and normalized to the total number of osteocytes analyzed in the trabecular bone section (100 × positive Ost / total Ost, %).”

2) Fig. 3 has an error in panel A, it was mistakenly placed the same graph of panel G. The corrected Fig. 3 is presented below:
