The authors regret that the previously published confidence intervals in Table 5 and the *p*-values were not correctly aligned with the Incidence Risk Ratios (IRRs). During the stage of transferring data to the table format, we made an omission of the confidence intervals (CIs) of the 'dependent' subscale, causing the CI values for the subsequent subscales to be shifted up. In the previously published table, the CI values for the 'schizoid' subscale erroneously took the CIs of the intercept of the model. We provided a corrected table. This misalignment of the CIs did not affect our study findings or interpretation.

The corrected Table 5 as follows:

Personality Disorder	IRR ^{a,b}	95% CI ^c	<i>p</i> ^d
Antisocial	1.02	1.00–1.05	0.103
Avoidant	1.03	1.00–1.06	0.089
Borderline	0.97	0.93–1.01	0.126
Dependent	1.04	1.01–1.07	0.009
Histrionic	1.02	0.99–1.04	0.211
Narcissistic	1.07	1.03–1.10	<0.001
Obsessive-Compulsive	1.01	0.99–1.03	0.536
Paranoid	1.04	1.02–1.07	0.002
Passive-Aggressive	0.96	0.94–0.98	0.002
Schizoid	0.95	0.93–0.97	<0.001

^a IRR = Incidence Rate Ratio.

^b "Time in Service" was used to account for the known interval of time.

^c 95% CI = 95% Confidence Interval.

^d *p* = Wald chi-squared test.

The authors would like to apologize for any inconvenience caused.
