The authors would like to inform the readers of needed clarification regarding errors inserted in Table 3 of this article. (See Table 3.)

In the information on the group analysis for multiple sexual partners, the row corresponding to the information on the estimate of the parameter Sigma^2 actually corresponds to the information on the interaction term between control-case status and multiple sexual partners (Cases:MSP). The information reported for I^2 is actually the information for Sigma^2 and the information for I^2 was not presented. In addition, we have changed the name of the column "Mean structure" to parameter, since parameters like Sigma^2 and I^2 are not related to the mean structure of the models.

The authors wish to apologise for any inconvenience caused.

Table 3
Results of the most parsimonious models for the groups of studies.

Group	Parameter	Estimate	ci.lb	ci.ub	pval
Case-controls	intrcpt	−1.7127	−2.4708	−0.9546	< 0.0001
	Cases	1.056	0.7872	1.3247	< 0.0001
	Sigma^2	1.2107	0.4373	4.3989	< 0.0001
	I^2				95.42743
Multiple sexual partners	intrcpt	−1.7222	−2.6954	−0.749	0.0005
	Cases	0.986	0.524	1.4481	< 0.0001
	MSP	0.0117	−0.023	0.0463	0.5091
	Cases: MSP	−0.0042	−0.0305	0.022	0.7513
	Sigma^2	0.8324	0.268	41,482	< 0.0001
	I^2				93.96373
Immunosuppressive therapy	intrcpt	1.2869	0.3323	2.2414	0.0082
	HPV-	−0.0453	−0.5163	0.4257	0.8504
	Sigma^2	0.9365	0.1798	6.7102	< 0.0001
	I^2				87.4806

Heterogeneity by means of Higgins's tests.
Abbreviation: ci.lb.: 95% confidence interval lower bound; ci.ub: 95% confidence interval upper bound; intrcpt: intercept; MSP: multiple sexual partners.
