Corrigendum

Corrigendum to “Time of on-scene resuscitation in out-of-hospital cardiac arrest patients transported without return of spontaneous circulation” [Resuscitation 138 (2019) 235–242]

Corina de Graaf*, Stefanie G. Beesems, Rudolph W. Koster

Amsterdam UMC, Academic Medical Center, Heart Center, Department of Cardiology, Meibergdreef 9, Amsterdam, The Netherlands

The authors regret there is an inconsistency in Fig. 3 ‘Time on scene intervals and 30-day survival of patients transported with ongoing CPR’. The number of patients per interval (<20 min; 20–30 min; >30 min), displayed in Fig. 3 (n = 165; 270; 192) are incorrect

compared to the number of patients described in the Fig. 3 legend (n = 178; 282; 195). The authors have corrected the numbers in Fig. 3 so they correspond with the numbers in the Fig. 3 legend. The authors would like to apologize for any inconvenience caused.

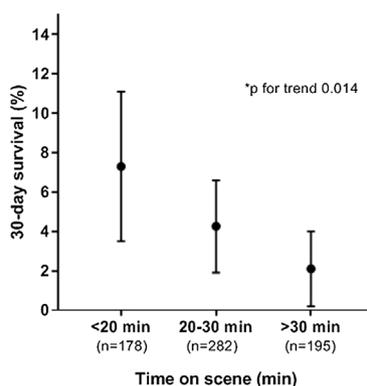

Fig. 3 Time on scene intervals and 30-day survival of patients transported with ongoing CPR. Of 178 patients which were transported within 20 min of time on scene, 13 (7%) survived. Of the 282 patients transported after 20–30 min, 12 (4%) survived and of 195 patients transported after 30 min, 4 (2%) survived.
