

Editorial Commentary

In this issue of *The Journal of Foot & Ankle Surgery*, we emphasize the work of two institutions, namely MedStar Georgetown University and the University of Texas Southwestern, where the diabetic foot and lower extremity wounds are treated with expertise and studied with the aim of advancing our knowledge of these prevalent conditions. I am grateful for the editorial work that Paul J. Kim, DPM, MS, Professor of Plastic Surgery at the University of Texas Southwestern, Dallas, Texas, and a Section Editor

for our journal, put forth in the compilation of the articles that we selected for this issue. I hope that you enjoy reading the reports contained herein, and that the information is useful in the management of your patients.

D. Scot Malay, DPM, MSCE, FACFAS
Editor, *The Journal of Foot & Ankle Surgery*
