When this paper was first published there was duplication of “Descriptor 2” in the section “Domain Two: Antimicrobials and antimicrobial resistance” in Appendix A.

There should only be four descriptors listed in this section:

1. Recognize the symptoms of infection.
2. Describe at least two different ways that antimicrobials may kill bacteria.
3. Discuss how inappropriate antimicrobial use (including nonadherence to treatment regime) may lead to antimicrobial resistance.
4. Identify approaches to support optimal prescribing of antimicrobials.

DOI of original article: <https://doi.org/10.1016/j.jhin.2018.06.022>.

* Corresponding author. Address: School of Health Sciences, Cardiff University, Cardiff CF24 0AB, UK. Tel.: +44 0 7710 389059.

E-mail address: courtenaym@cardiff.ac.uk (M. Courtenay).

Thus there are a total of 54 individual descriptors overall (not 55, as indicated in the abstract and text).
